

Nexxis

Nexxis is excited to announce the newest addition to the Inuktun OnSite Standard Products line-up: The Versatrax 100™ Mark II

pipe inspection vehicle. The Mark II is a miniature pipe inspection system just like its predecessor, with a variety of configurations that can tackle almost any confined space inspection application. Offering full modularity, the Versatrax 100™ Mark II can be arranged either inline for small diameters, in parallel configuration for larger pipes and ductwork, or with a magnetic attachment for vertical and inverted travel on ferrous surfaces. Small size is a key feature with options that include multiple cameras,

longer tethers, advanced reporting software and image enhancement systems to create endless possibilities.

It is simple to use and quick to deploy making the Versatrax 100™ Mark II robotic crawler ideal for scheduled or emergency inspection in municipal water and sewer pipelines, nuclear generating stations, hydroelectric facilities, oil and gas refineries and more.

The system is truly portable with the entire system packaged in hard shell, industrial carry cases making it easy for transport and quick to setup in almost any environment. The standard Versatrax 100™ Mark II system comes with two 4000 series Microtracs™, a Spectrum 45™ pan and tilt camera, two auxiliary lights, 100 metre (330 foot) extra-long tether, ICON software control system with interface box for the inline and/or parallel chassis and wiring harness setup.

New Cost-Effective Equotip Portable Hardness Tester

EQUOTIP became the industry standard in portable hardness testing when it was introduced in 1975. Still proudly Swiss-made, Proceq's

flagship product the Equotip 550 is a complete all-in-one hardness testing solution which combines Leeb with portable Rockwell and UCI (Ultrasonic Contact Impedance) methods. The Equotip 550 has enhanced software with interactive wizards, automatic verification processes, personalized options, custom report functions and much more. Nevertheless, for some single probe users the fully-featured Equotip 550 sits outside of their budget and comes with more software elements than are needed for basic regular hardness testing.

Introducing the Equotip 540 portable hardness tester

which sees Proceq reaching out to the cost-conscious single probe user who doesn't require extensive reporting or extra accessories (it doesn't come with a test block, surface roughness comparator plate or coupling paste). The Equotip 540 is designed for a single probe: Leeb D for on-site testing of heavy, large or installed parts or in UCI HV1-10 format for fine-grained materials with any shape and heat-treated surfaces. However, it is important to note that probes are not interchangeable, and the operator must assign the impact direction prior to testing. Happily, the Equotip 540 can be upgraded at a later time to the Equotip 550 if requirements change.

Russell Fraser Sales has produced a useful infographic which can assist users in determining whether they need the Equotip 550 or if the Equotip 540 is adequate. Contact Russell Fraser Sales today for assistance.

SmartChem

SmartChem Industries continues its growth in the Australasian NDT

market. The Smartcheck range of MT and PT consumables have been well received by the NDT and engineering industries due to the proven quality of their product range.

Directors Stuart and David Smart having over 50 year's experience in the manufacture and distribution of NDT consumables are committed to maintaining their focus on providing quality products at competitive prices with prompt reliable service.

The Smartcheck NDT products are tested against Australian and International specifications, and certificates of conformance are available. Where possible, raw materials

are sourced from Australian suppliers. All aerosols are filled in Australia.

SmartChem also stocks a range of complimenting equipment, including 240V AC yokes, permanent magnets and UV Lights.

In Western Australia, Heatleys Sales are the exclusive distributor for Smartcheck NDT Products. Products are available ex-stock in WA. Enquiries should be directed to the Heatleys branches, or their head office at Canning Vale (08)9256 5200, www.heatleys.com.au
